

Excerpt from the passion 2020 should 7

so we need to start off with a discussion of the hottest topic on the planet right now. what's that? coronavirus. coronavirus. the coronavirus is more than what it seems, and you'll see perhaps by the end of our session today how this all kind of ties in.

the coronavirus is, well, it's getting the news on the planet right now. why is that? well, because ...

linda: drama.

adamus: drama, but because the news is faster than ever. you get the news very, very quickly and people on social media, people with their blogs and everything else, it's very, very quick. it just goes to show how quickly something can be brought to consciousness on the planet. everybody's tuned into it. it's going so fast, the news is spreading so fast, partly because it's drama. it's a lot of drama, and a lot of people feeding into the drama. they love being the one that posts something that's really not true. and there's a lot of mistruths about it right now, but there's a lot of drama. and, you know, my experience is that, as much as people say they don't like drama, they love it. they love it, otherwise it wouldn't be in their lives. otherwise, they would leave it. they would walk away from it. but they love it. they feed off it. it's kind of like an odd way of reminding them that they're alive. so there's a lot of drama going on on the planet right now with this coronavirus.

anybody here have coronavirus? I should ask before we get started. anybody here

have it? no? anybody watching online, any shaumbra have coronavirus? hm? would you admit if you did? if you were sitting here, would you admit it?

everybody's got it. everybody's got it. you have the potential within you. you have the genes or the chromosomes that essentially have it. it just hasn't manifested, hasn't been brought to the surface. just as every one of you has the genes and the chromosomes for cancer and just about everything else nasty that you can get. you don't necessarily get it from out there and it suddenly arrives because somebody comes up to you and gives you a big hug, you know, face-to-face (adamus hugs wim). oh, i'm sorry. i'm so sorry (adamus chuckles). you've got the potential within you. it's already there. it just is triggered by things, triggered by attention. a lot of attention in the news to it can actually kind of trigger it. so everybody's got it.

so take a deep breath with that. you've already got it. don't worry. but it doesn't mean it's going to manifest.

in one of our recent workshops, I talked about the coronavirus and I said every virus that there is has its energetic patterns, its origins in something. it's not necessarily what it appears to be. the coronavirus, for instance, it's the energy of economics on the planet. it's an economic imbalance, so the virus comes in. you know the sexual energy virus? it's a virus of consciousness. it shows up in the body and the mind in different ways, but the coronavirus is an economic virus.

look what's happening. not that many people have it. how many people right now do you think are afflicted with it? any guesses? any good guesses?

shaumbra 1 (woman): fifty thousand.

adamus: how many?

shaumbra 1: like 50,000.

adamus: fifty thousand. anybody else? like two million, a billion maybe? no? it's about 80,000 right now that actually have it. not all have been diagnosed with it.

how many have died from it? (someone says "three thousand") four thousand. good. yeah. you either watch the news or you're very intuitive (adamus chuckles). about 4,000. now, that's a lot of people. but in the scheme of things, it's not really a lot in terms of a virus. the normal flu in the united states this year, since the flu season started – when would that be, about october – 39 million people in america have gotten the flu. that's a lot. that's a lot more than coronavirus, but it's not in the news. and out of those, about 30,000 have died from just the common regular flu.

so, you see kind of the strange dynamics, the drama, the imbalance taking place with this whole coronavirus thing. it's in the news. it's everywhere. everybody's talking about it. people are panicking. people are going to the store and wiping out – no pun intended – the toilet paper supply and hand sanitizers and all the rest of these things. panic all over. I popped in when cauldre and linda were shopping the other day – and, by the way, for those who are new, cauldre is what i call this geoffrey – when cauldre and linda were shopping the other day, it was crazy. i've never seen

anything like it with the people rushing and pushing each other and taking toilet paper off of somebody else's cart and putting it on their own (some chuckles). and that was cauldre! (laughter) it's amazing. I mean, I couldn't believe, he's my channeler! (more chuckles)

so there's a lot of panic about the coronavirus. in a way, that's good, because it brings a global consciousness. there's nothing else in the world right now that's bringing that kind of attention, focused attention on things. but, at its core, it's really about economics.

you know, every virus, again, has its energy pattern, its meaning in something else. this is the economic virus. and look at what it's doing. look at how it's affecting the planet. it's affecting everything. travel – people stop making travel plans. they're in fear. and the chances of them getting this are about .002 percent. about .002 percent. not a lot. but people are in this hysteria. if they even think the word "airport," they think they're going to catch it. just thinking the word "airport." it's causing a lot of disruptions and will continue to in anything related to travel – airlines, hotels, business meetings, going to the office. really anything that requires transactions with groups is going to be affected on the planet.

it's also going to affect ultimately food distribution, because, for instance, the farmer may not want to go to the market. the truck driver doesn't want to haul the goods in. nobody wants to go to the grocery store, because they're afraid they're going to pick it up there. so it's really going to have a big impact on distribution and goods.

now, as this happens, as this occurs, it's going to have an impact on the planetary economy of about 3 ½ to 4 ½ percent hit on the economy. and you say, you say – well, how much money do you have in your purse? (to lydia) right now, how much money is in your purse? (slight pause) you could take his – take her pur- ... how much money does she have in her – how much money do you have in your pocket?

wim: now?

adamus: now.

wim: two hundred dollars.

adamus: two hundred dollars. so it would be like losing, what, \$4.00 or something. you'd get by. you know, you probably wouldn't miss it. you wouldn't even think about it. is that all you have in your pocket?

wim: yes, it is.

adamus: and you're from poland?

wim: yes.

adamus: and you're traveling around here?

wim: because I have a card.

adamus: you have a card. ohh, you have a card. well, i was going to give you some money to help with things, because that's all you had.

wim: thank you.

adamus: but that's all right. you have a card, but i'll give you the money anyway. just (wim chuckles), just, just ... (adamus hands him some cash) okay, to help you get around the island. yeah (audience says "ooh!" and some applause).

i'm trying to make a point also – let abundance come to you. if you're worried about this whole thing, let abundance come. he didn't even ask for it. he didn't want it, but he got it. start expecting that, by the way. it just comes to you. you didn't come here thinking you were going to get paid to sit here. yeah. he's saying, "i'm never going to spend that!" (some chuckles)

so, it's going to have an impact, let's say, about 3 ½ percent, maybe 4 ½ percent of the global economy. now, that's a lot money. that's a lot of money, but not really, because after this whole scare thing is done, things will get back to normal. people will need to go back and replenish their supplies, and then they're going to think, "oh, boy. I didn't have enough toilet paper. I didn't have enough emergency food. now I better stock up on that also." and so they're going to buy a little extra.

but ultimately, it's bringing a focus, a worldwide focus. ultimately, the thing it's going to affect most is the economy, but ultimately it's going to get back to where it was. if you

are in the stock market, if you're an investor, invest now when the prices are down, because it will go back up. I mean, some of the airlines, a few may go out of business, but they'll figure out a way to get your money sooner or later. they'll be right back in the black pretty soon.

but I want you to feel into what's really happening on the planet, the scare with it, the fact that really not that many have it. worst case scenario – i've done some calculations – worst case scenario is you're going to get maybe 100 to 140 million people that have it. that's a lot of people. that's a lot of getting sick. that's a lot of laying in bed. but ultimately the mortality rate, the death rate, is actually not that high. it's similar to or slightly higher than a regular flu.

so, yes, a lot of people die, and I'm not glossing over that fact, but it's just something that's on the planet like cancer, like anything. it's going to happen. i'm not taking it lightly, but I'm saying let's not overreact to it. let's see it for what it really is.

(from the merabh)

you've got this coronavirus. it's a big distraction. it's disrupting a lot of things, but it's really a big distraction from the other things going on on the planet. i mean, it's real. it's about the economy. it has everybody all concerned and jumpy.

then you've got this other thing going on that most people will never realize. at the same time right now is the order of the arc is closing down.
